

PACE PHARMACY
AND COMPOUNDING EXPERTS

To Whom It May Concern:

This letter is an explanation of our extemporaneous mixture of Progesterone Suppositories for insurance/third party providers.

This medication is not commercially available and must be compounded by a pharmacist from raw materials. We incorporate micronized progesterone powder, almond oil, silica gel, And witepsol base into suppository shells (medium size). With a prescription from a physician licensed in Canada, we can compound prescription medications in a variety of strengths and dosage forms with any combination of ingredients. The finished product is available in any quantity prescribed.

BREAKDOWN OF PRODUCTS USED:

Progesterone Micronized USP, Almond Oil (Sweet) NF, Silica Gel micronized powder, and Witepsol II-15 NF base.

Since this is a mixture of several ingredients there is no DIN which represents the finished product; however the main active ingredient, progesterone, is the same as in the product with DIN 02166704.

If you have any further questions, do not hesitate to contact us.

Yours Truly,

Adam Silvertown, RPh, BScPhm, BSc.
